

Jim

(actual size when printed on A4 paper)

Print this PDF to check how the frame measurements compare to your existing glasses.

To compare your current glasses against these style simply place them onto the image below, you can check the scale using our ruler.

A thoroughly practical pair of men's large square glasses, full-rimmed Jim are made from a sophisticated composite metal containing titanium which makes them bendable (though not unbreakable) and more resilient than standard metal glasses. A satin finish gives them style, while plastic arm tips, and soft adjustable nose pads are designed for secure all-day comfort.
